

**BMC Group**

July 30, 2017

Dear Sir or Madam,

I am writing to apply for the software engineer position advertised; I feel that my skills and experience would make me an ideal candidate for this role.

I am a software developer currently living and working in the LA area. My expertise are JavaScript development with Angular 2 and server development with Ruby on Rails.

At my current position with QuikStor Security and Software I am the lead front-end developer. My responsibilities include development of scalable and intuitive user interfaces, integrating with the .NET API, and inter-team communication. I believe that these skills match well with the needs of the BMC Group team.

Further, I have undertaken several independent development projects which have given me considerable experience with technologies and tools which I believe will help BMC Group develop powerful data-driven analytics. Technologies such as Ruby on Rails, Jekyll, MongoDB, Node.js, Travis continuous integration, and cloud hosting solutions.

I value clear written and verbal communication to ensure projects are completed efficiently. I also have excellent problem-solving skills which allow me to deal with the unknown and unexpected. I am extremely resourceful with the willingness and work ethic to learn new technologies and skills in the ever-changing field of software development.

I believe that my experience, drive and passion for learning and hard work would make me an excellent addition to the BMC Group team. I look forward to hearing from you.

Sincerely,

**Natalie Smith**
