Professional Profile

- Skilled software developer.
- Angular 2 expert.
- Full-stack development using ruby on rails.
- A focus on powerful yet intuitive user interface design.
- Experienced with both unit and integration tests.
- Ability to work effectively within a team setting while also being a motivated, proactive and self-starting independent worker.
- Possess willingness and work ethic to learn new technologies and skills
- Extensive experience with customer service and practical problem-solving as well as exceptional written and verbal communication skills

Technical Skills

- | | |
|---------------------------|--------------------------|
| ○ Angular 2 | ○ Javascript/jQuery |
| ○ HTML5/CSS3 | ○ Ruby on Rails |
| ○ UI/UX Design | ○ Full-Stack Development |
| ○ Test-Driven Development | ○ JSON/XML |
| ○ C/C++ | ○ Computer Vision |
| ○ C#/.NET | ○ Sensor Integration |

Experience

QuikStor Security & Software

Software Engineer

Van Nuys CA

May 2017–Present

Responsible for front-end development of large-scale cloud web application. Designed, developed and implemented page components using Angular 2.

- Responsible for front-end development of a large-scale cloud web application.
- Designed, developed and implemented user-interface components using Angular 2.
- Created intuitive yet powerful designs using HTML, CSS3 and Typescript.
- Designed efficient and reliable HTTP network communication.
- Collaborated in a team environment.

University of Victoria**Victoria BC***Undergraduate Researcher**May–Aug 2015*

Worked in the Crystal Growth Laboratory designing a new control system for a 30 zone crystal growth furnace.

- Ran experiments on the crystal growth furnace including material preparation, furnace loading, and sample testing using a Scanning Electron Microscope
- Designed and implemented a fuzzy PID control system in LabView with adaptive control for the crystal growth furnace

University of Victoria**Victoria BC***Undergraduate Researcher**Sept–Dec 2013*

Worked in the Biomedical Design and Systems Laboratory developing a medical phantom for use in testing and calibrating an ultrasound-controlled hand prosthesis.

- Designed and developed a medical phantom representing the ultrasonic properties of the tendon-hand system
- Tested prototypes and determined ultrasonic properties of materials
- Used an Ultrasonix ultrasound machine and MatLab to capture video and images of phantom prototypes

Island Health**Victoria BC***Clinical Engineering Co-op**Jan–Apr 2013*

Worked in the Biomedical Engineering department of Island Health to assist in tasks such as device procurement and installation, cost analysis, preventative maintenance, and consulting with medical professionals.

- Assisted in medical device procurement and installation in hospital settings
- Performed cost analysis for major contract renewals
- Performed preventative maintenance on medical devices such as infusion pumps, defibrillators, and AEDs
- Consulted with medical professionals within multiple health networks across Canada in preparation for a networked fetal monitoring system

Saanich Commonwealth Place**Victoria BC***Team Leader, Facility Attendant**2011–2017*

Work in supervisory roles as a Team Leader and Facility Attendant to oversee multiple staff and ensure that programs are running safely and effectively.

- Team Leader: Directly supervise a team of lifeguards to ensure safe pool coverage, oversee first aid situations, mediate public relations situations and provide excellent internal and external customer service
- Facility Attendant: Responsible for overseeing all facility programs, coordinating and providing back-up for all staff and conducting emergency procedures in case of emergencies

Education

University of Victoria**Victoria BC***B.Eng, Biomedical Engineering**2011–2016*

Specialization in Mechatronics

Technical Projects

NeuroJS: Contributes to a 'deep-learning' open source project called NeuroJS. Using React and RxJS the project aims to create a real-time brain-data visualization package for bio-medical research.

Web Development: Developed multiple full stack web applications in both Ruby on Rails and Angular2. Portfolio available upon request.

Mechatronics: Designed the firmware to accomplish a conveyor belt sorting task

- Integrated multiple sensors, actuators and motors with a micro-controller programmed in C

Neural Networks: Designed a neural network to classify data instances in an online breast cancer database as malignant or benign

- Used MatLab to implement a three-layer feed-forward neural network to automatically classify instances of breast cancer malignancy

Biomedical Image Processing: Solved task of retinal vessel segmentation in retinal images by using MatLab to implement adaptive local thresholding by multithreshold probing
