Harris Computers   April 19, 2017

Dear Sir or Madam,

I am writing to apply for the software developer position advertised; I feel that my skills and experience would make me an ideal candidate for this role.

I have been passionately pursuing software development challenges through academic electives, co-op positions, and personal projects. These experiences have turned me into a skilled developer who can help Harris Computers to achieve its vision of the future. I am practiced at using a variety of web development technologies such as HTML5/CSS3, Javascript, Angular2, Ruby on Rails, C#/.NET and MySQL.

Further, I have technical project experience in several additional skills which Harris Computers may find useful, including test driven development and image processing working in C/C++ and MatLab.

My wide-ranging work experience has given me the ability to work effectively within a team setting while also being a motivated, proactive and self-starting independent worker. I value clear written and verbal communication to ensure projects are completed efficiently. I also have excellent problem-solving skills which allow me to deal with the unknown and unexpected. I am extremely resourceful with the willingness and work ethic to learn new technologies and skills in the ever-changing field of software development.

I believe that my experience, drive and passion for learning and hard work would make me an excellent addition to the Harris Computers team. I look forward to hearing from you.

Sincerely,

Natalie Smith
